

MDR from Proact

The 24/7 security solution that never sleeps

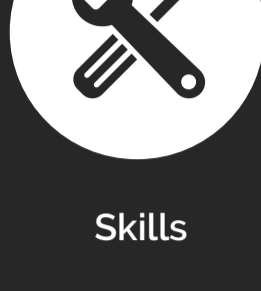

With so many cyber security attacks occurring outside of typical business hours, **24/7 coverage** is critical if you are to respond to and contain an incident quickly.

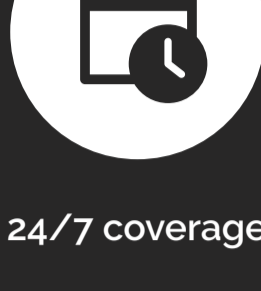

Key challenges today in securing your organisation:

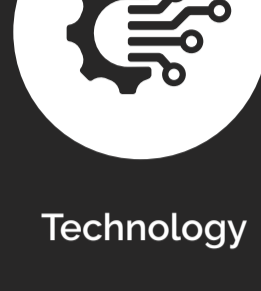

People

Skills

24/7 coverage

Technology

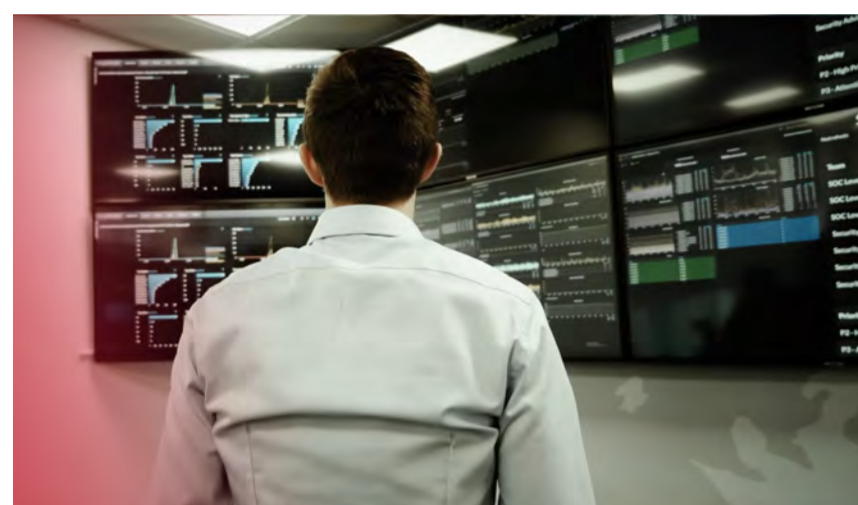

Gartner

Therefore, it is no surprise that Gartner now suggests that **by 2025, 50% of organisations will be using MDR services for threat monitoring, detection and response functions that offer threat containment and mitigation capabilities.***

What is MDR?

Managed Detection and Response – Proactive threat hunting and response to threats on end points. Combining our experience and expertise with cutting edge technology for advanced detection and containment of cyber attacks.

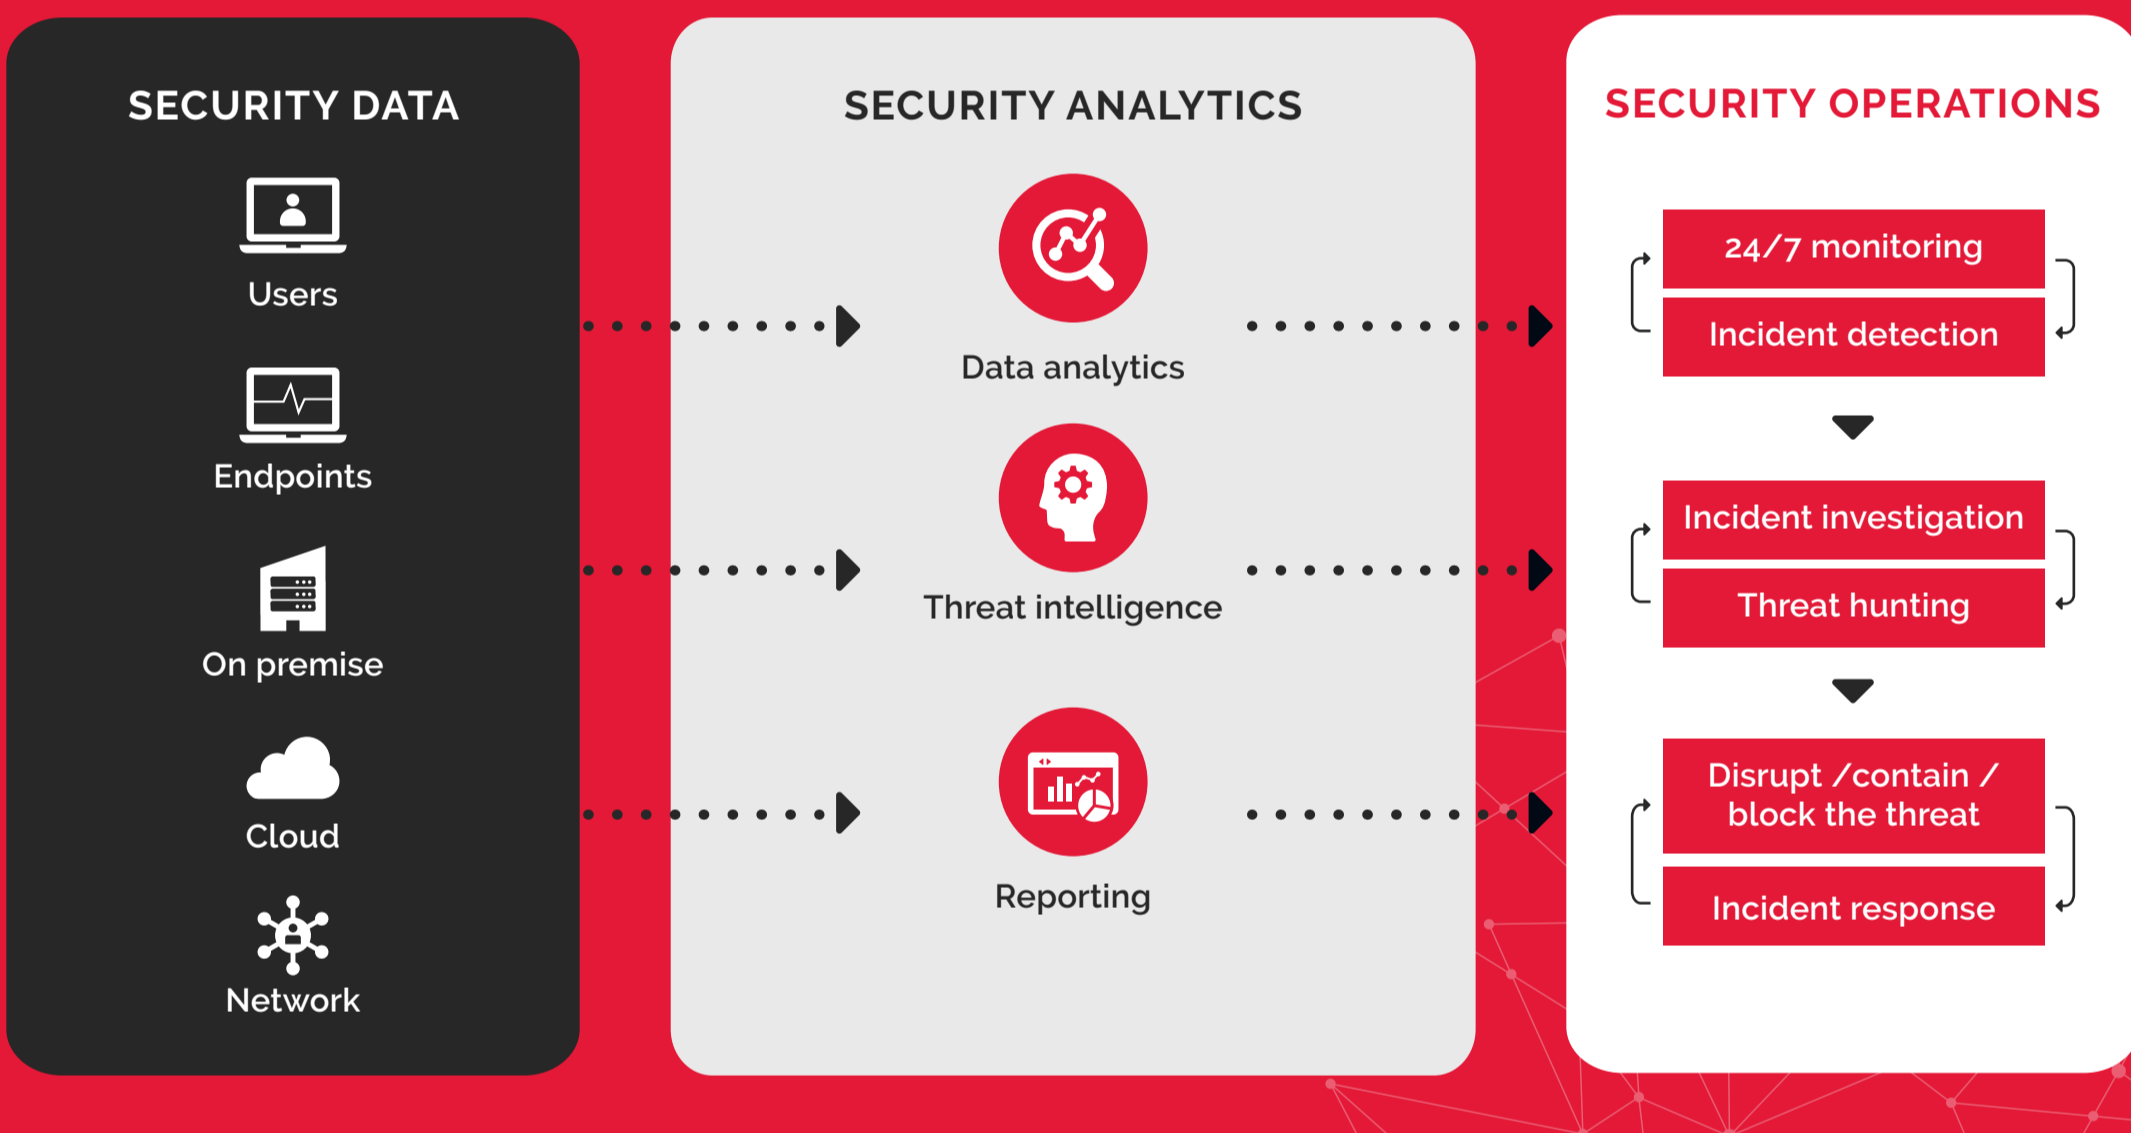

Managed Detection & Response from Proact

Combining Microsoft SIEM and EDR

Proact 24/7 Managed SOC

Detection and Response Services

What is XDR? How is it different to MDR?

Extended Detection and Response (XDR) is broadening the scope of MDR to provide extended detection and response capabilities across multiple technologies.

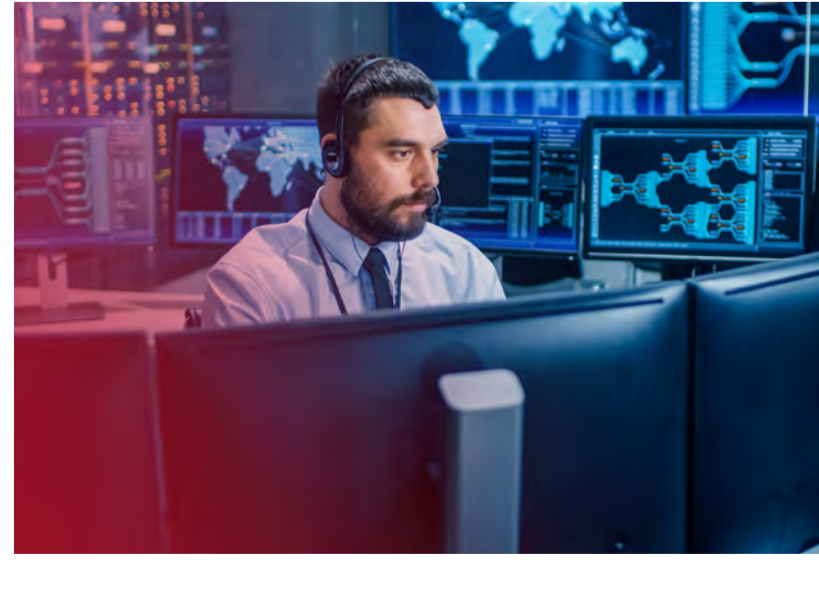

PROACT XDR SERVICES
Coordinated threat prevention, detection and response across networks, servers, cloud and email
Combining Proact security services and solutions for defense in depth

Customer Benefits

- ✓ 24/7 threat detection and response
- ✓ Direct intervention to cyber threats
- ✓ Continuous management - tuning and monitoring of a security logging and visibility program
- ✓ Security operations and in-house for a fraction of the cost of an in-house SOC
- ✓ Combined Proact experience, expertise and threat intelligence

Why Proact Security Services?

- 🕒 10 years SOC experience
- 🏠 3 x UK-based SOC
- 🤝 Strategic security partner
- 🔍 Cost-effective risk reduction
