## Do you know what kind of data you have, where it is, and who can access it?

If you can't answer "yes" to these questions, your organisation might be vulnerable to compliance and cybersecurity risks and, of course, increased costs.

Our Cloud Data Sense Service classification helps reduce that vulnerability by giving you constant visibility into the data residing in your entire storage footprint— and lets you take action to optimally control, govern, and protect it.

For a limited time we are offering a free 1tb trial and proof of concept for clients to evaluate this service.

### Optimise

#### Optimise storage and save money

Identifies your stale, duplicate, and nonbusiness data and enables you to move or delete it to free up storage space and reduce costs

### Accelerate

#### Accelerate cloud data migration

Filters your data so you can migrate only what's needed and allowed, minimizing migration time, cost, and compliance and security risks

### Maintain

#### Maintain regulatory compliance

Automates recognition of personal identifiable information (PII) and reporting for General Data Protection Regulation (GDPR), California Consumer Privacy Act (CCPA), Payment Card Industry Data Security Standard (PCI DSS), Health Insurance Portability and Accountability Act (HIPAA), and data subject access requests (DSARs) to reduce manual efforts and streamline compliance operations

### Improve

#### Improve data security

Finds issues regarding improper data access and can provide real-time alerts about exposed data, helping you prevent leakage of personal, sensitive, and private information

Using our service allows you to see service scans and classify data by using AI-driven natural language processing (NLP) for contextual data analysis and categorisation, giving you actionable insights and reporting – all through one pane of glass

This provides a view of your data across on-premises and multicloud storage and supports a wide array of vendors, technologies, and data type:

## NetApp:

- NetApp Cloud Volumes ONTAP® software (deployed in AWS, Azure, or Google Cloud)
- On-premises Netapp ONTAP® clusters
- NetApp StorageGRID® object storage
- Azure NetApp Files
- Amazon FSx for NetApp ONTAP
- NetApp Cloud Volumes Service for Google Cloud

## Third party:

- Dell EMC Isilon
- Pure Storage
- Nutanix
- Any other storage vendor

## Cloud:

- Amazon Simple Storage Service (Amazon S3)
- Azure Blob
- Google Cloud Storage
- Microsoft OneDrive
- Microsoft SharePoint Online
- Microsoft SharePoint On-Premises (SharePoint Server)
- Google Drive
